Defoam 2000
Defoaming agent on fluorosilicone basis for the distillation of textile dry-cleaning machines

PROPERTIES:
- destroys foaming reliably and prevents „boiling over“ of the distilling vessel
- acts successfully also in silicone solvents
- prevents foaming effectively
- does not contain any volatile components or any agents harmful to the solvent system

APPLICATION:
Give Defoam 2000 into distilling vessel before beginning of distillation. Since the active substance of Defoam 2000 remains in the distilling vessel the defoaming effect continues as long as the distilling vessel is cleaned. Defoam 2000 is applicable in many organic solvents (f.i. PCE, HC, SENSENE™ etc.)

Dosing recommendation:
Low foam formation: 10 - 20 ml per 100 l solvent (12.5 - 25 fl oz/10 gal)
Strong foam formation: 20 - 40 ml per 100 l solvent (25 - 50 fl oz/10 gal)

TECHNICAL DATA:
Density 20 °C (68 °F) 0.87 g/ml

HINTS:
Storage
Store container tightly closed and upright. The product can be stored for at least 24 months in its original sealed packing.

For industrial use only. This information sheet is for guidance only. The data set out here are based on the current status of our knowledge and experience. They do not in any way relieve users of the need to carry out their own checks and tests for suitability of the products for the intended processes and purposes. This data in the information sheet do not represent assurance of properties and stability of the products we are to supply. Subject to technical modifications within reason.
